DelVal Ball Valves

- Integral top flange design provides direct mounting of actuator or gear and easy access to the adjustable packing gland, even with the actuator or gear mounted.
Benefit: Eliminates need for bracket and coupling. Extends packing life in severe applications and reduces down time.
- Live loaded, double “V” stem packing and Viton stem “O” ring
Benefit: Provides dependable stem sealing under all critical conditions.

DelVal High Performance Double and Triple Offset Butterfly Valves

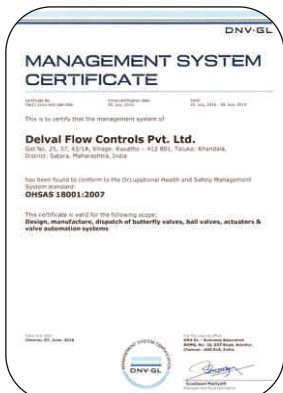

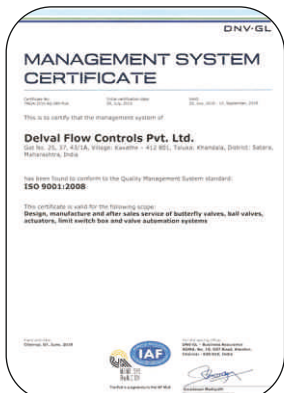

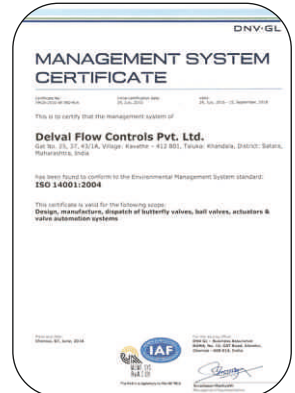

- Disc located and held by a one-piece, high strength alloy steel stem with precision taper pins.
Benefit: Robust design, ensures bi-directional leak tightness at rated pressure, with low operating torque.
- Live loaded, multiple “V” stem packing with adjustable gland
Benefit: Dependable fugitive emission stem sealing in critical applications as standard

DelTorq Pneumatic Actuators & Valve Automation Systems

- Two external travel stops permit adjustments of shaft rotation to +/- 5 degrees.
Benefit: Provides flexibility for setting of valve closure elements and increase seat life.
- Modular, pre-loaded spring cartridges to allow wide spring torque outputs
Benefit: Flexibility for fail close/open applications and safe disassembly of end caps during maintenance.
